

# Overall project directories structure

I have organized the project in the following subdirectories:

- 1) there are 3 different Caffe forks in `<home>/caffe_tools`, but you need only one
- 2) the “cats vs dogs” project is placed in `<home>/ML/cats-vs-dogs`
- 3) the DeePhi tools are placed in `<home>/DNNDK`
- 4) my AWS keys are placed in `<home>/ML/AWS/keys`

*More details in the following pages*
